SUMMARY

Final-year BCA student (**CGPA 9.55**) and practising AI/ML Engineer currently interning at **Capsitech IT Solutions, Jodhpur** — contributing to a live UK FinTech product. Architected a **multi-agent data enrichment platform** integrating **6+ external APIs** via LangGraph StateGraph. Independently shipped 4 AI applications spanning agent pipelines, conversational RAG, candidate screening, and civic tech. Proficient in LangChain, LangGraph, ChromaDB, Ollama, Groq, Flask, and Streamlit. Seeking **Applied AI or ML Engineering roles**.

EXPERIENCE

Capsitech IT Solutions Aug. 2025 – Present

AI/ML Intern (UK FinTech Client) Jodhpur, Rajasthan

- Architected a multi-source data enrichment platform integrating **6+ external APIs** (Tavily, Companies House, PDL, Hunter.io) using **LangGraph StateGraph** with parallel entry nodes and dependent aggregation nodes — eliminating sequential API latency.
- Built production-grade **Pydantic validation**, JSONL output pipelines, telemetry tracking, and graceful JSON-repair for malformed API responses; tool is undergoing **live FinTech deployment** in a business-intelligence environment.
- Delivered real-time Streamlit session management and pipeline log-browsing UI; collaborated with cross-functional teams to translate FinTech requirements into scalable, auditable AI workflows.

PROJECTS

Data Enrichment Tool LangGraph · LangChain · Streamlit · Pydantic · Tavily · Companies House · PDL · Hunter.io

- Designed a **17-module** multi-agent platform that aggregates company and contact intelligence from 6+ sources simultaneously using a LangGraph DAG — 3 parallel nodes (identity, registration, contact) feed into 3 dependent aggregation nodes for company basics, offerings/leadership, and brand monitoring.
- Engineered robust data quality: **Pydantic schema enforcement**, domain extraction handling .co.uk/.com.au edge cases, json-repair for malformed responses, and standardised company-name capitalisation across all API sources.
- Added full **telemetry and audit system** — pipeline execution tracking, JSONL batch output, and a Streamlit UI for browsing and reloading previous enrichment records.

Neural RAG Chatbot LangGraph · ChromaDB · Ollama · pdfplumber · OCR · SQLite · Python

- Built a **session-aware, multi-modal RAG system** where each conversation gets its own isolated ChromaDB vector collection and SQLite-persisted message history via LangGraph StateGraph — ensuring zero cross-session data leakage.
- Supports multi-format document ingestion — PDFs (smart table extraction via pdfplumber), plain text, and scanned images (OCR) — chunked and embedded locally using **nomic-embed-text** via Ollama; runs **100% offline**, zero cloud APIs.
- On each query, relevant chunks are retrieved from the session's vector store and injected as a system message before local LLM inference — delivering **document-grounded answers** with full conversation memory across turns.

HireScope — AI Candidate Screening Flask · Groq API · SQLite · PyMuPDF · Gunicorn · Werkzeug

- Full-stack recruitment platform where **Groq LLM** parses uploaded PDF resumes via PyMuPDF, extracts skills and experience, and generates structured **candidate fit scores** with natural-language assessment summaries.
- Designed a **4-table SQLite schema** (candidates, assessments, applications, users) with parameterised queries (SQL-injection safe), Werkzeug secure file handling, and Flask session-based multi-user access with admin/recruiter roles.
- Deployed on **Gunicorn WSGI** with full candidate lifecycle: upload → AI assessment → shortlisting → **CSV export** — plus dashboard metrics and application-status tracking.

CityZen — Civic Issue Reporting Platform Flask · SQLite · Jinja2 · HTML5/CSS3/JS

- Built a full-stack civic platform with **dual-role auth** (citizen + admin), 5+ issue categories, image upload, geo-tagging, and a hot-issue trending algorithm surfacing the most-reported problems.
- Implemented a **citizen-to-admin messaging system** with issue assignment, status workflow (open → in-progress → resolved), and flash feedback — across 15+ Flask routes and 12 Jinja2 templates.
- Engineered secure file upload with path validation, CRUD across 3+ SQLite tables, and session management preserving user context across the full **request lifecycle**.

EDUCATION

Parul University (Online Mode) Aug. 2024 – 2027

Bachelor of Computer Applications (BCA) Vadodara, Gujarat

- **CGPA: 9.55 / 10** (current) · Coursework: Data Structures, Algorithms, Databases, Computer Systems, Machine Learning

Army Public School, Jodhpur

Class XII (CBSE) 79% — 2024 | Class X (CBSE) 88% — 2022 Jodhpur, Rajasthan

- **AWES Scholarship Merit Recognition (2021–22)** — Army Welfare Education Society, awarded for academic excellence.

SKILLS

AI/ML: LangChain, LangGraph, RAG Systems, ChromaDB, Ollama, Groq API, Vector Embeddings, Pydantic

Backend & APIs: Python, Flask, Streamlit, REST APIs, Gunicorn, Werkzeug, Jinja2

Data & Docs: pandas, PyMuPDF, pdfplumber, JSON/JSONL, Trafilatura, OCR (GLM-OCR)

Databases: SQLite, ChromaDB, SQL

Tools: Git, GitHub, python-dotenv, Tavily, Companies House API, PDL, Hunter.io

Frontend: HTML5, CSS3, JavaScript
